Strengthen performance, achieve climate change goals and improve quality of life.

Sodexo uses accredited and standardised Energy Management systems.

Energy Management

If you are reassessing your existing energy management efforts, considering evolving space usage or beginning to seriously assess it for sustainability, potential savings and optimisation, Sodexo can help.

Our global expertise and local focus create the perfect combination of big ideas and practical assessment and implementation to ensure you’re getting the most from your energy budget while shrinking your carbon footprint, without sacrificing productivity.

Strengthen performance, achieve climate change goals and improve quality of life.
One Partner for Everything You Need

Sodexo simplifies and optimises your energy management programmes, providing you with a single source for all the consultation, creation and continual improvement services you need to achieve your goals for today and scale your potential for tomorrow.

Partnership
- On-site partner able to execute your energy management programme
- Comprehensive experience & expertise
- Consulting capability in energy procurement and utility expense management to maximise cost savings and switch to green renewable energy sources

Monitoring and Targeting
- Targeted approach to monitoring and reporting resulting in controlled energy usage
- Accurate data collection for cost visibility allowing for energy project business case creation and informed decision-making
- Root cause analytics programmes for continuous improvement

Performance
- Compliance with regulatory requirements
- Unique, fully funded energy offerings resulting in cash positive savings from day one
- Extended asset lifecycles through efficient running and performance enhancing solutions
