In today’s environment, it is essential that buildings and workspaces remain healthy for everyone. This is important to your staff as well as the people you serve. By actively monitoring people’s temperatures at points of entry*, your security and reception teams can control infection more easily. This will help manage building capacity and offer peace of mind to the people you serve.

With contactless human temperature monitoring at your building’s entry points, Sodexo provides heightened safety for employees, visitors, customers and contractors. The installation of equipment limits unnecessary queuing in your reception areas, and the provision of protection equipment, materials and physical distancing signposting ensure the safety of everyone in the building.

Assuring Associate Health & Safety

Help people feel at ease; securely monitor the temperature of every person at your organisation.

*subject to local legislation
ATTENTION

Please note that Human Temperature Checking is in operation at this site.

Access will only be granted to those that show no signs of raised temperature or fever.

2m
